# Catalog of solar flare events in the Hα line
# 1972 – 2017

**A.V. Borovik, A.A. Zhdanov**
**ISTP SB RAS**

The catalog is compiled according to the data:

1972-1974 - Quarterly Bulletin of Solar Activity (QBSA, https://previ.obspm.fr/index.php?page=flares&sub=qbsa);

1975-2010 - National Oceanic and Atmospheric Administration (NOAA, https://www.ngdc.noaa.gov/stp/space-weather/solar-data/solar-features/solar-flares/h-alpha/events/);

2011-2017 - National Oceanic and Atmospheric Administration (NOAA, ftp.swpc.noaa.gov/pub/warehouse).

Description of tables:

1 **№** - flare sequence number.

2 **Date (dd, mm)** – day and month.

3 **Imp (opt)** – optical importance of flare.

4 **See** – seeing conditions.

*San Vito, Learmonth, Holloman, Palehua, and Ramey observatories use a five-point scale, while other observatories use a three-point scale.*

5 **Obs (type)** – type and completeness of observation.

**C** – for either a complete or nearly complete cinematographic sequence.
**E** – for an electronic measurement.
**P** – for a photographic sequence with either a few photos or only one.
**V** – for either a complete or nearly complete visual record.
**S** – for only a fragmentary visual record.

6 **Lat** – average heliographic latitude.

7 **CMD** – average heliographic central meridian distance.

*These two coordinates (Lat and CMD) mark the mean center of mass of the flaring region at its time of maximum brightness.*

8 **AR** – serial number of active region in which the flare occurred (NOAA/USAF numbering).

9 **CMP (yyyy/mm/dd.d)** – date (year, month and the fraction of day) that the flare's position either crossed or would have crossed the sun's central meridian.

10 **Time (start)** – time (UT) of flare onset.

**B** - the letter "B" following a start time means that the flare began earlier than the tabulated time.
**U** - the letter "U' following a start time stands for uncertain.

11 **Time (max)** – time (UT) that flare reached maximum brightness.

**U** - the letter "U' following a time of maximum brightness stands for uncertain.

12 **Time (end)** – flare end time (UT).

**A** - the letter "A" following an end time means that the flare ended after the tabulated time.
**U** - the letter "U' following an end time stands for uncertain.

13 **Time (rise)** – duration of flare's initial phase in minutes (until the time of maximum brightness is reached).

14 **Time (decay)** – duration of flare's main phase in minutes.

15 **Time (duration)** – duration of flare in minutes.

16 **Area measurement (Apparent)** – average apparent (projected) area at the time of maximum brightness expressed in millionth of the area of the solar disk.

*The maximum brightness and maximum flare area may be fixed at different times. If these areas differ by more than two times, then the area isnot indicated in this column.*

17 **Area measurement (Corr)** – average apparent area corrected for foreshortening and expressed in units of square degrees.

18 **Imp (xray)** – class of flare at X-ray wavelengths.

19 **Station** – station name abbreviation.

*In group reports of stations about the same flare, priority was given to the station with the electronic type of observations or the station with the largest number of reports in the original catalogs.*

20 **Remarks** – noteworthy conditions of flare.

**A** – eruptive prominence <90 degrees from the central meridian.
**B** – probably the end of a more important flare.
**C** – invisible 10 min earlier.
**D** – brilliant point.
**E** – two or more brilliant points.
**F** – several eruptive centers.
**G** – no visible spot nearby.
**H** – flare accompanied by high-speed dark filament.

**I** – active region very extended.
**J** – distinct variations in plage intensity before or after flare.
**K** – several intensity maxima.
**L** – existing filaments suddenly active.
**M** – white-light flare.
**N** – continuous spectrum shows polarization effects.
**O** – observations made in H and K lines of calcium II.
**P** – flare shows helium D3 in emission.
**Q** – flare shows Balmer continuum in emission.
**R** – asymmetry in H-alpha line suggests high speed mass ejection.
**S** – brightness followed filament disappearance in the same position.
**T** – region active all day.
**U** – two bright branches, parallel or converging.
**V** – an explosive phase: important expansion in about 1 min that often includes a significant intensity increase.
**W** – great area increase after time of maximum brightness.
**X** – unusually wide H-alpha line.
**Y** – system of loop prominences.
**Z** – sunspot umbra covered by flare.

A detailed analysis of the source catalog data can be found in the works:
