

The Catalog of Solar Flare Events with X-ray Class M1 - X>17.5

XXIII cycle of Solar Activity (1996 - 2008)

by V.N. Ishkov IZMIRAN, GC RAN

Version 2 - with some corrections and additions: da - the angular span of the CME (Halo = 360 deg.);
Solar proton enhancement.

y m d - date: year, month, day;

to tm te - begin, maximum, end of the flare event;

Xray/opt - X-ray class and optical importance of the flare event;

L (J*m-2) - the integrated flux from start-max to 1/2 max, in joule m-2;

lt, lg, L - the spherical, heliographic coordinates of the solar flare in H? as a distance in degrees
from the solar equator (heliographic latitude), and distance in degrees from a line extending
from the north solar rotational pole to the south solar rotational pole through the center
of the solar disk as viewed from Earth (central meridian). The Carrington longitude (L)
is the heliographic longitude of a solar feature in the coordinate system that rotates with the Sun.

AR - solar active region;

RADIO - the peak value above pre-burst background of associated radio bursts at frequencies of
245 and 2695 MHz in (s.f.u.) solar flux units (1 flux unit = $10^{22} \text{ Wm}^{-2} \text{ Hz}^{-1}$).

RADIO SWEEP - The intensity is a relative scale from 1 (minor) to 3 (major) of any sweep radio
event associated with the energetic event, as follows: Type II: Slow drift burst.
Type IV: Broadband smooth continuum burst.

CME - coronal mass ejection: to - First C2 Appearance; v - Linear Speed [km/s]; da - the angular
span of the CME (Halo = 360 deg.) pa - Position Angle measured from Solar North in degrees
(counter-clockwise); g - no data.

MIV -

X-ray hard - A - Space satellite,

tm - time of maximum intensity hard X-ray burst in this flare event;

Emax(keV) - maximal energetic band hard X-ray in the flare event

Date Time [UT]

y - data YOKHOH: <http://gedas22.stelab.nagoya-u.ac.jp/HXT/catalogue/>

b - data BATS: http://umbra.nascom.nasa.gov/batse/batse_years.html

o - data OSSE: <http://heseweb.nrl.navy.mil/gamma/solarflare/flarelib.htm>

h - data HESSI: http://hesperia.gsfc.nasa.gov/hessidata/dbase/hessi_flare_list.txt

k - data KORONAS-F: Kuznetsov S.N. et al.

n - data under report Muraki

* - before to means, that all the given flares make one flare event;

* - after date - there are no data for 21-24.05.2002 (no 12 page in SGD II for May 2002 (2002 N11));

* - instead of an optical important is put, if at present was not Ha-patrol;
the optical important after "*" - means, that the given optical ball has been resulted in
Preliminary SGD and not confirmed in SGD II;

g - no data;
! 3 CME during flare events;
CME 19991127 1254 - a=67.2;
- Coordinates flare events with small letters are given for the restored events,
1. When at presence of Ha-patrol flare in SGD II is not registered, in this case x-ray burst with a high probability was carried out for solar limb;
if corresponding CME it was not observed after number of active region the sign is put "?";
2. In case of if flare event coordinates are in Preliminary SGD and are not present in SGD II;
- a sign "?" before hard X-ray burst means, that time of a maximum of its realization is close, but is not entered during realization flare events;
- if after a x-ray class is not present "/", coordinates of flare were defined on localization of x-ray flare (there is no message on optical flare in SGD II though Ha-patrol was).
- Protons - solar protons increases with the E>10 MeV associated with this solar flare event:
D - day of SPE onset; tmax - time of maximum proton flux; Ipr - maximum proton flux (p.f.u.= cm-2s-1sr-1); GLE - ground level event.

1996 - 1997
